

- Charge is in Coulombs (C) (1C = 1 A·s)
 - Signed quantity (+/-)
 - $e = 1.602 \times 10^{-19} \text{ C}$
 - Protons are +, electrons are -
 - $1 \text{ C} = 6.25 \times 10^{18}$ electrons or protons
 - $1 \mu\text{C} = 10^{-6} \text{ C}$
- Charge is conserved
- Likes repel, opposites attract

Just like gravity:

$$F_E = k \frac{q_1 q_2}{r^2}$$

- F_E = force of attraction or repulsion (N)
- k = "Coulomb constant" ($8.99 \times 10^9 \text{ Nm}^2\text{C}^{-2}$)
- q_1 = charge 1 (C)
- q_2 = charge 2 (C)
- r = center to center distance (m)

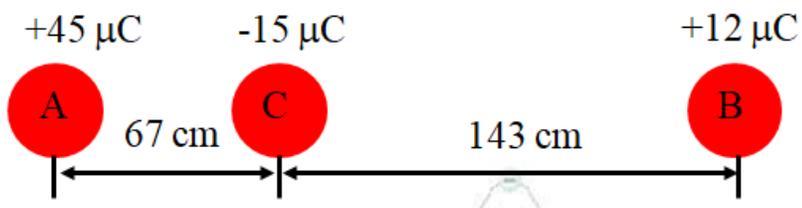

Example 1- What is the force of attraction between a helium electron and its nucleus if the electron is $1.7 \times 10^{-10} \text{ m}$ away?)

Example 2 – Two charged spheres have a force of repulsion of 5.40 N when their centers are 0.120 m apart. What is the force of repulsion when their centers are 0.360 m apart?

Whiteboards - Work these out - if you don't get the right answer, watch the video to see how to do it.

<p>1. Jess Uwaite places a $+3.0 \mu\text{C}$ charge 3.5 m from a $+5.0 \mu\text{C}$ charge. What is the force of repulsion? ($1 \mu\text{C} = 10^{-6} \text{ C}$) (0.011N)</p>	<p>2. Noah Verkreinatlaad places a 5.0 C charge how far from a 3.0 C charge to make the force between them exactly 4.00 N? ($1.8 \times 10^5 \text{ m}$ or 180 km)</p>
<p>3. Cally Seniks measures a force of attraction of 4.50 N between two charges when their centers are separated by 1.20 m. What is the force of attraction when their centers are separated by 0.950 m? (7.18 N)</p>	<p>4. Rita Book measures a force of attraction of 12.0 N between two charges when their centers are separated by 2.50 m. At what separation is the force of attraction 7.00 N? (3.27 m)</p>

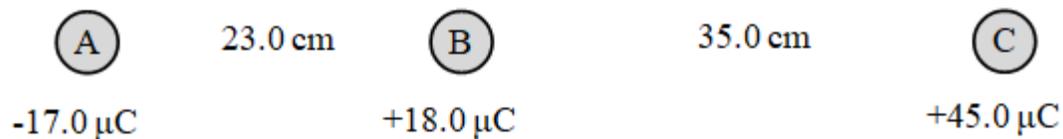

Find the net force on B:

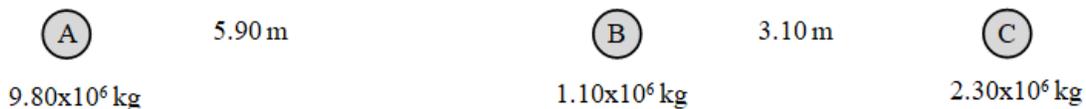

Write down the three steps:

Whiteboards - Work these out - if you don't get the right answer, watch the video to see how to do it.

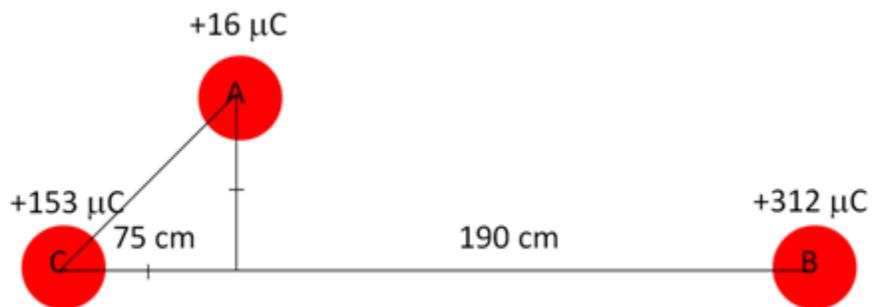

Find the force on A:

Find the force on B: (Use the force of gravity formula - $F = \frac{Gm_1m_2}{r^2}$, $G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$)

Find the net force on A:

Write down the three steps:

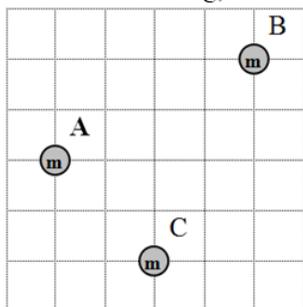

Try this one:

B. A is 1.60×10^6 kg, and B is 2.10×10^6 kg, and C is 6.30×10^6 kg.

Use the force of gravity formula -

$$F = \frac{Gm_1m_2}{r^2}$$

$$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$$

(88.2 N right and down at 38.1° below the x-axis)

Gravitational	Electrical

<p>Field: $g = \frac{F}{m}$</p> <p>g - gravitational field strength (N/kg) F - force exerted by field on the mass (N) m - the mass (kg)</p> <p>$g = G \frac{M}{r^2}$</p> <p>g - g near a point mass <u>toward</u> mass (N/kg) G - $6.67 \times 10^{-11} \text{ Nm}^2\text{kg}^{-2}$ M - the mass (kg) r - distance from the point mass (m)</p>	<p>Field: $E = \frac{F}{q}$</p> <p>E - electric field strength (N/C) F - force exerted by field on charge (N) q - the charge (C)</p> <p>$E = k \frac{q}{r^2}$ (not in data packet)</p> <p>E - E near a point charge <u>away</u> from charge (N/C) k - $8.99 \times 10^9 \text{ Nm}^2\text{C}^{-2}$ q - the charge (C) r - distance from the point charge (m)</p>
---	---

Example 1 - A +125 μC charge experiences a force to the right of 0.0175 N. What is the Electric field, and its direction?

Example 2 - An electron travels through a region where there is a downward electric field of 325 N/C. What force in what direction acts on the electron, and what is its acceleration?

Whiteboards - Work these out - if you don't get the right answer, watch the video to see how to do it.

1. Ishunta Dunit notices that a charge of $-125 \mu\text{C}$ experiences a force of 0.15 N to the right. What is the electric field and its direction? (1200 N/C left)

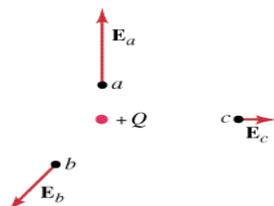

2. Doan Botherme places a $+12 \text{ mC}$ charge into an upward 160 N/C electric field. What force in what direction does it experience? (1.9 N up)

3. Alfred O. Dadark is on a planet where a mass of 0.12 kg experiences a downward force of 7.80 N . What is the gravitational field on the surface of this planet? (65 N/kg down)

4. Telly Vishun places an unknown charge into a known upward electric field of 612 N/C , and the charge experiences a downward force of $.851 \text{ N}$. What is the charge? (-1.39 mC)

5. Sal F. Hone levitates a 0.00125 kg ball with an upward electric field of 590 N/C . What is the charge on the ball?
(Hint gravity = electrical force) ($+20.8 \mu\text{C}$)
 $Eq = mg$

<p>Field: $g = G \frac{M}{r^2}$</p> <p>g - g near a point mass <u>toward</u> mass (N/kg) G - $6.67 \times 10^{-11} \text{ Nm}^2\text{kg}^{-2}$ M - the mass (kg) r - distance from the point mass (m)</p>	<p>Field: $E = k \frac{q}{r^2}$ (not in data packet)</p> <p>E - E near a point charge <u>away</u> from charge (N/C) k - $8.99 \times 10^9 \text{ Nm}^2\text{C}^{-2}$ q - the charge (C) r - distance from the point charge (m)</p>
--	---

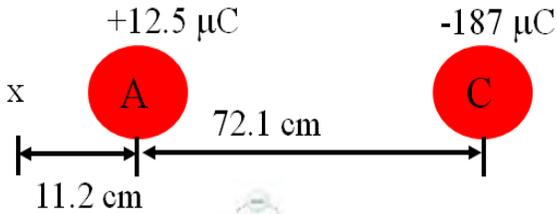

Example: What is the electric field 2.0 m to the right of a $-21 \mu\text{C}$ charge?

Whiteboards - Work these out - if you don't get the right answer, watch the video to see how to do it.

<p>1. Vera Similitude measures the electric field 13.5 m to the right of a $-1.45 \mu\text{C}$ charge. What electric field in what direction? (71.5 N/C to the left)</p>	<p>2. Vesta Buhl measures an electric field of 2,120 N/C, 67 cm from a charge of unknown value. The electric field is away from the charge. What is the charge? ($+0.11 \mu\text{C}$)</p>
<p>3. Amelia Rate measures a gravitational field of 3.4 N/kg. What distance is she from the center of the earth? ($M_e = 5.98 \times 10^{24} \text{ kg}$) ($1.1 \times 10^7 \text{ m}$)</p>	<p>4. Tara Bull measures an electric field of 10. N/C what distance from an electron? ($12 \mu\text{m}$)</p>

<p>Field: $g = G \frac{M}{r^2}$</p> <p>g - g near a point mass <u>toward</u> mass (N/kg) G - $6.67 \times 10^{-11} \text{ Nm}^2\text{kg}^{-2}$ M - the mass (kg) r - distance from the point mass (m)</p>	<p>Field: $E = k \frac{q}{r^2}$ (not in data packet)</p> <p>E - E near a point charge <u>away</u> from charge (N/C) k - $8.99 \times 10^9 \text{ Nm}^2\text{C}^{-2}$ q - the charge (C) r - distance from the point charge (m)</p>
--	---

Example: What is the electric field at the x ?

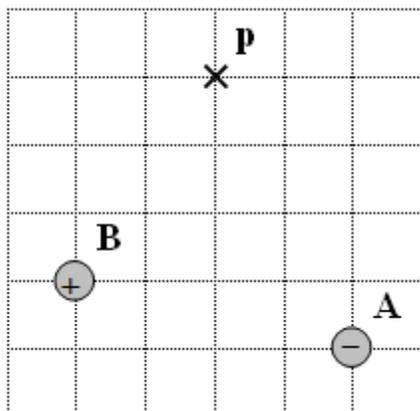

Whiteboards - Work these out - if you don't get the right answer, watch the video to see how to do it.

<p>1. Find the gravitational field at p: (49.0 N/kg to the left)</p> <p>  $1.80 \times 10^6 \text{ m}$ (p) $9.10 \times 10^6 \text{ m}$  $2.70 \times 10^{24} \text{ kg}$ $8.20 \times 10^{24} \text{ kg}$ </p>	<p>2. Find the electrical field at p: (51.6 N/C to the right)</p> <p> (p) 13.0 m  $-2.30 \mu\text{C}$ 21.0 m  $+9.10 \mu\text{C}$ </p>

Noteguide for Fields in Non Linear Arrays - Videos 16G2 Name _____

I think you will be OK if you pick only one of these. They are a lot like the vector force ones. If you do both that would be better - but I will leave that up to you.

Find the electric field at point p. Charge A is $-3.20 \mu\text{C}$, B is $+4.40 \mu\text{C}$, and each grid line is a meter.
 (2640 N/C right and up at 28.1° with the x axis)

Find the gravitational field at point p. Mass A is $1.60 \times 10^{12} \text{ kg}$, B is $3.9 \times 10^{12} \text{ kg}$, and each grid line is a meter.
 (21.5 N/kg right and down at 18.6° with the x axis)
