1. What is the momentum of a 0.145 kg baseball going $32.0 \mathrm{~m} / \mathrm{s}$ ?
2. What is the impulse of a 13.0 N force acting for 3.20 s ?
3. What speed does a 0.00820 kg bullet need to go to have $4.64 \mathrm{kgm} / \mathrm{s}$ of momentum?
4. A person running at $4.80 \mathrm{~m} / \mathrm{s}$ has $317 \mathrm{kgm} / \mathrm{s}$ of momentum. What is their mass?
5. For what time must you exert a 11.2 N force to create 20.0 Ns of impulse?

|  | Momentum $\mathbf{p}=\mathbf{m v}$ |
| :---: | :---: |
| $12190 \mathrm{~kg} \mathrm{~m} / \mathrm{s}$ | 1. What is the momentum of a 23 kg cannon shell going $530 \mathrm{~m} / \mathrm{s}$ ? |
| $4.8 \mathrm{~m} / \mathrm{s}$ | 2. What speed must a 5 kg object go to have $24 \mathrm{~kg} \mathrm{~m} / \mathrm{s}$ of momentum? |
| 0.066 kg | 3. A bullet going $640 \mathrm{~m} / \mathrm{s}$ has $42 \mathrm{~kg} \mathrm{~m} / \mathrm{s}$ of momentum. What is its mass? |
| $2.825 \mathrm{~kg} \mathrm{~m} / \mathrm{s}$ | 4. What is the momentum of a 2.50 g bullet going $1130 \mathrm{~m} / \mathrm{s}$ ? |
| 3.29 kg | 5. What is the mass of a bowling ball that has a momentum of $46.0 \mathrm{~kg} \mathrm{~m} / \mathrm{s}$ when it is going $14.0 \mathrm{~m} / \mathrm{s}$ ? |
| $906 \mathrm{~m} / \mathrm{s}$ | 6. What speed must a 6.40 g bullet go to have the same momentum as a 145 g baseball going $40.0 \mathrm{~m} / \mathrm{s}$ ? (Roughly 90 mph ) |
|  | Impulse Impulse $=\mathbf{F} \boldsymbol{\Delta t}$ |
| 7.8 Ns | 7. What is the impulse imparted by a rocket that exerts 4.8 N for 1.63 seconds? |
| 0.36 s | 8. For what time must you exert a force of 45 N to get an impulse of 16 Ns ? |
| 10.7 N | 9. What force exerted over 6 seconds gives you an impulse of 64 Ns ? |
| 9.02 Ns | 10. What is the impulse that a baseball bat gives a ball with a force of 2820 N exerted for 0.00320 s ? |
| 1.67 s | 11. For what time must you exert a 12 N force to impart $20 . \mathrm{Ns}$ of impulse? |
| 21.3 N | 12. What force exerted for 15.0 s imparts an impulse of 320 . Ns? |
|  | (These that follow are assessed on 6.1 - these are just extra practice problems) Impulse and Momentum $\mathbf{F} \boldsymbol{\Delta} \mathbf{t}=\mathbf{m} \boldsymbol{\Delta v}$ |
| 10.3 m/s | 13. What is the change in velocity of a 0.35 Kg air track cart if you exert a force of 1.2 N on it for 3.0 seconds? |
| 119 kg | 14. A rocket engine exerts a force of 500 N on a space probe (in outer space!) for 5.0 seconds. The probe speeds up from rest to a speed of $21 \mathrm{~m} / \mathrm{s}$. What is its mass? |
| 1184 N | 15 . What force exerted for 0.012 seconds will make a 0.145 Kg baseball change its velocity 98 $\mathrm{m} / \mathrm{s}$ ? |
| 0.71 s | 16. What time must the space probe in question 14 . fire its engines to change its velocity by 3 $\mathrm{m} / \mathrm{s}$ ? |
|  | Rocket Propulsion |
| 3040 N | 17. A rocket engine burns 5 kg of fuel per second. The exhaust gas velocity is $608 \mathrm{~m} / \mathrm{s}$. What |
| 3.95 s | is the thrust of the engine? What time must it burn to impart an impulse of 12,000 Ns? How |
| 19.7 kg | much fuel will it burn to do this? |
| $880 \mathrm{~m} / \mathrm{s}$ | 18. An 11 Ns rocket engine has 12.5 grams of fuel. What is the exhaust velocity? |
| $0.02 \mathrm{~kg} / \mathrm{s}$ | 19. A rocket generates 25 N of thrust, and the exhaust gas velocity is $1250 \mathrm{~m} / \mathrm{s}$. At what rate |
| 6.0 kg | does it consume fuel in $\mathrm{kg} / \mathrm{s}$ ? How much fuel has it burned in 5 minutes? |
| 180.8 s | 20. A small rocket probe in deep space has a mass of $68.5 \mathrm{~kg}, 45.2 \mathrm{~kg}$ of which is fuel. Its |
| $2.63 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ | engine consumes .250 kg of fuel per second, and it has an exhaust velocity of $720 \mathrm{~m} / \mathrm{s}$. For |
| $7.73 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ | how much time will the engine burn? What is the initial acceleration of the rocket engine? What is the acceleration just before it runs out of fuel? |
| 140 s | 21. A rocket takes off from the surface of Earth straight up. The total mass of the rocket is |
| 75 kN | $5000 \mathrm{~kg}, 3500 \mathrm{~kg}$ of which is fuel. The exhaust gas velocity is $3000 \mathrm{~m} / \mathrm{s}$, and the rocket |
| $\begin{aligned} & 5.2 \mathrm{~m} / \mathrm{s} / \mathrm{s} \\ & 40.2 \mathrm{~m} / \mathrm{s} / \mathrm{s} \end{aligned}$ | consumes 25 kg of fuel per second. For how long do the engines burn? What is the thrust of the engine? What are the initial and final accelerations of the rocket? (Don't forget gravity!) |

## $\mathbf{F} \Delta \mathbf{t}=\mathbf{m} \Delta \mathbf{v}$

1) If you exert a force of 45 N on a 52 kg frictionless cart at rest for 3.5 seconds, what is its change in velocity?
2) A 295 kg spacecraft has rockets that exert a force of 0.050 N (ion propulsion).

For what time must you "burn" these engines to change the velocity of the spacecraft by $350 . \mathrm{m} / \mathrm{s}$ ?
3) A 540 kg stage set floating on air bearings undergoes a change in velocity of $1.2 \mathrm{~m} / \mathrm{s}$ in 31 seconds. What force was exerted?

Velocity reversal: the change of $34 \mathrm{~m} / \mathrm{s}$ to the left to $40 \mathrm{~m} / \mathrm{s}$ to the right is a change of $74 \mathrm{~m} / \mathrm{s}$, so
$\Delta \mathbf{v}=74 \mathrm{~m} / \mathrm{s}$. (Use $\mathbf{F} \Delta \mathbf{t}=\mathbf{m} \Delta \mathbf{v}$ )
4) A 0.145 Kg baseball going $40.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $61.0 \mathrm{~m} / \mathrm{s}$. If the collision lasted for 0.0120 seconds, what force did the bat exert on the baseball?
5) A 0.141 Kg baseball going $32.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $50.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 1960 N , for what time was it in contact with the bat?
6) A ball going $35.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $42.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 1780 N for 0.00630 seconds, what is the mass of the ball?

Rocket Thrust: $\mathbf{F} \boldsymbol{\Delta t}=\mathbf{m} \Delta \mathbf{v}$ - remember, if it says 45 grams per second that is 0.045 kg in $\underline{1}$ second 7) A rocket engine produces $410 . \mathrm{N}$ of thrust for 17.0 s with an exhaust velocity of $710 \mathrm{~m} / \mathrm{s}$. What mass of fuel does it burn in this time?
8) A rocket engine burns 1.20 kg of fuel generating 72.0 N of thrust with an exhaust velocity of $540 \mathrm{~m} / \mathrm{s}$. What time does the engine burn?
9) A rocket engine burns fuel at a rate of 13.0 grams per second, and has an exhaust velocity of $690 \mathrm{~m} / \mathrm{s}$. What thrust does it develop? ( 1000 grams $=1 \mathrm{~kg}$ )
10) A rocket engine burns fuel at a rate of 12.0 grams per second, and develops a thrust of 8.50 N . What must be the exhaust velocity? ( 1000 grams $=1 \mathrm{~kg}$ )

## Initial and final acceleration:

11) A 8.30 kg rocket, 5.20 kg of which is fuel, burns all of its fuel in 12.0 seconds with an exhaust velocity of $610 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? (Thmose 26.3 N )
12) A 320 kg rocket, 280 kg of which is fuel, burns all of its fuel in 32.0 seconds with an exhaust velocity of $780 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? (Thmst $=6825 \mathrm{~N})$
13)A 71.0 kg rocket (total mass of fuel and rocket), burns 51.0 kg of fuel at a rate of $2.10 \mathrm{~kg} / \mathrm{s}$ with an exhaust velocity of $650 . \mathrm{m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? (chrust $=1365 \mathrm{~N})$

1. A $600 . \mathrm{kg}$ stage set on frictionless air bearings goes from rest to $0.850 \mathrm{~m} / \mathrm{s}$ in 12.5 seconds. What force acted on the set?
2. A 0.142 Kg baseball going $41.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $53.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 2350 N , for what time was it in contact with the bat?
3. A rocket engine burns 12.0 grams of fuel $(0.0120 \mathrm{~kg})$ in 1.10 seconds with an exhaust velocity of $782 \mathrm{~m} / \mathrm{s}$. What it the thrust of this engine?
4. A rocket engine burns fuel at a rate of 53.5 grams per second, and develops a force of 65.2 N . What must be the exhaust velocity? (1000 grams $=1 \mathrm{~kg}$ )
5. A 60.0 kg rocket, 48.0 kg of which is fuel, burns 2.15 kg of fuel per second with an exhaust velocity of $982 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? For what time do the engines burn?
optional: (What is its acceleration at $\mathrm{t}=10.0 \mathrm{~s}$ ? Make a graph of the acceleration.)

## Practice 6.1 - Rocket Science!!!!! (optional)

1. a. A 35.0 N unbalanced force is exerted on a 7.10 Kg mass for 36.0 seconds. What is the change of velocity of the mass? ( $177 \mathrm{~m} / \mathrm{s}$ )
b. A 0.145 Kg baseball going $41.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $31.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 2530 N , for what time was it in contact with the bat? $(0.00413 \mathrm{~s})$
c. A rocket burns 42.4 kg in 6.50 s with an exhaust velocity of $720 \mathrm{~m} / \mathrm{s}$. What is the thrust of the engine? ( 4697 N )
d. A rocket engine burns fuel at a rate of 4.10 grams per second, and develops a force of 12.2 N . What must be the exhaust velocity? $(1000$ grams $=1 \mathrm{~kg})(2976 \mathrm{~m} / \mathrm{s})$
e. A 114 kg rocket (total mass of fuel and rocket), burns 95.0 kg of fuel at a rate of $3.50 \mathrm{~kg} / \mathrm{s}$ with an exhaust velocity of 790 . $\mathrm{m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? ( $14.5 \mathrm{~m} / \mathrm{s} / \mathrm{s}, 136 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ )
2. a. A 62.0 N unbalanced force is exerted on an object for 4.5 seconds. The mass changes velocity from rest to $47 \mathrm{~m} / \mathrm{s}$. What is the mass of the object? $(5.94 \mathrm{~kg})$
b. A 0.138 Kg baseball going $37.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $45.0 \mathrm{~m} / \mathrm{s}$. If the collision lasted for .0121 seconds, what force did the bat exert on the baseball? $(935 \mathrm{~N})$
c. A rocket engine develops 1240 N of thrust burning 56.2 kg of fuel in 21.5 s . What is the exhaust velocity? $(474 \mathrm{~m} / \mathrm{s})$
d. A rocket engine burns fuel at a rate of 1.40 grams per second, and has an exhaust velocity of $890 \mathrm{~m} / \mathrm{s}$. What thrust does it develop? $(1000$ grams $=1 \mathrm{~kg})(1.25 \mathrm{~N})$
e. A 324 kg rocket, 292 kg of which is fuel, burns all of its fuel in 38.0 seconds with an exhaust velocity of $880 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? ( $11.1 \mathrm{~m} / \mathrm{s} / \mathrm{s}, 202 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ )
3. a. A force is exerted on a 23 Kg mass for 15 seconds. The mass changes velocity from rest to $45 \mathrm{~m} / \mathrm{s}$. What was the force? ( 69.0 N )
b. A ball going $27.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $41.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 312 N for 0.0230 seconds, what is the mass of the ball? $(0.106 \mathrm{~kg})$
c. A rocket burns 35.1 kg of fuel generating $450 . \mathrm{N}$ of thrust with an exhaust velocity of $790 \mathrm{~m} / \mathrm{s}$. What time do the engines burn? (61.6 s)
d. A rocket develops a thrust of 14.2 N , with an exhaust velocity of $910 . \mathrm{m} / \mathrm{s}$. What mass in fuel does the engine burn every second? ( $0.0156 \mathrm{~kg} / \mathrm{s}$ or $15.6 \mathrm{~g} / \mathrm{s}$ )
e. A 67.0 kg rocket (total mass of fuel and rocket), burns 52.0 kg of fuel at a rate of $2.70 \mathrm{~kg} / \mathrm{s}$ with an exhaust velocity of 642 $\mathrm{m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? ( $16.1 \mathrm{~m} / \mathrm{s} / \mathrm{s}, 106 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ )
4. a. A 68 N unbalanced force is exerted on a 12 Kg mass. The mass changes velocity from rest to $35 \mathrm{~m} / \mathrm{s}$. What time did the force act? ( 6.18 s )
b. A 0.141 Kg baseball going $34.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $58.0 \mathrm{~m} / \mathrm{s}$. If the bat exerted a force of 1830 N , for what time was it in contact with the bat? ( 0.00709 s )
c. A rocket engine produces $360 . \mathrm{N}$ of thrust for 45.0 s with an exhaust velocity of $770 \mathrm{~m} / \mathrm{s}$. What mass of fuel does it burn in this time? $(21.0 \mathrm{~kg})$
d. A rocket engine burns fuel at a rate of 14.0 grams per second, and develops a force of 31.7 N . What must be the exhaust velocity? $(1000$ grams $=1 \mathrm{~kg})(2264 \mathrm{~m} / \mathrm{s})$
e. A 19.0 kg rocket, 14.0 kg of which is fuel, burns its fuel at a rate of $0.420 \mathrm{~kg} / \mathrm{s}$ with an exhaust velocity of $650 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? $(4.57 \mathrm{~m} / \mathrm{s} / \mathrm{s}, 44.8 \mathrm{~m} / \mathrm{s} / \mathrm{s})$
5. a. A 23 N unbalanced force is exerted on a 46 Kg mass for 18 seconds. What is the change of velocity of the mass? (9.00 $\mathrm{m} / \mathrm{s}$ )
b. A 0.143 Kg baseball going $36.0 \mathrm{~m} / \mathrm{s}$, strikes a bat, and heads straight back to the outfield at $86.0 \mathrm{~m} / \mathrm{s}$. If the collision lasted for 0.0120 seconds, what force did the bat exert on the baseball? ( 1454 N )
c. A rocket engine burns 2.20 kg of fuel generating 89.0 N of thrust with an exhaust velocity of $710 \mathrm{~m} / \mathrm{s}$. What time does the engine burn? ( 17.6 s )
d. A rocket engine burns fuel at a rate of 11.0 grams per second, and has an exhaust velocity of $752 \mathrm{~m} / \mathrm{s}$. What thrust does it develop? $(1000$ grams $=1 \mathrm{~kg})(8.27 \mathrm{~N})$
e. A 5.70 kg rocket, 4.60 kg of which is fuel, burns all of its fuel in 10.3 seconds with an exhaust velocity of $610 \mathrm{~m} / \mathrm{s}$. What are its initial and final acceleration as it takes off from earth? ( $38.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}, 238 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ )

1) A 6.10 g bullet going $830 . \mathrm{m} / \mathrm{s}$ imbeds in a stationary $310 . \mathrm{g}$ block of wood. What is the velocity of the block of wood just after the collision? $(16.0 \mathrm{~m} / \mathrm{s})$
2) A 6.50 g bullet imbeds in a stationary 170 . g block of wood. The bullet and block combo are going $21.0 \mathrm{~m} / \mathrm{s}$ after the collision. What was the velocity of the bullet before the collision? ${ }^{5} 70 \mathrm{~m} / \mathrm{s}$ )

3) A person at rest fires a 1.70 g rifle bullet to the right at $1320 \mathrm{~m} / \mathrm{s}$. The person recoils at $0.0290 \mathrm{~m} / \mathrm{s}$ to the left after this. What must be the mass of the person? $(77.4 \mathrm{~kg})$
4) A 52.0 kg person at rest fires a 1.80 g rifle bullet to the right. The person recoils at $0.0720 \mathrm{~m} / \mathrm{s}$ to the left after this. What must be the velocity of the bullet? $(2080 \mathrm{~m} / \mathrm{s})$
5) A 61.0 kg person fires a 5.40 g rifle shell at $870 \mathrm{~m} / \mathrm{s}$. If the person is initially at rest on a frictionless surface, what is their recoil velocity after firing? $(0.0770 \mathrm{~m} / \mathrm{s})$

6) A 3500 kg car going $23.0 \mathrm{~m} / \mathrm{s}$ strikes a 1400 kg car traveling in the same direction at $13.0 \mathrm{~m} / \mathrm{s}$ from behind. The two cars stick together. What velocity are they going after the collision? ( $20.1 \mathrm{~m} / \mathrm{s}$ )
7) A 3800 kg car (going an unknown velocity) strikes a 1100 kg car traveling in the same direction at $17.0 \mathrm{~m} / \mathrm{s}$ from behind. The two cars stick together and have a velocity of $23.0 \mathrm{~m} / \mathrm{s}$. What velocity was the first car going before the collision? $(24.7 \mathrm{~m} / \mathrm{s})$
8) A 1200 kg car going $24.0 \mathrm{~m} / \mathrm{s}$ strikes a 2600 kg car traveling in the same direction from behind. The two cars stick together and are going $19.0 \mathrm{~m} / \mathrm{s}$ just after the collision. What velocity did the other car have before the collision? ( $16.7 \mathrm{~m} / \mathrm{s}$ )

## Draw your own picture!

9) Two football players strike each other head on. Player 1 has a mass of $120 . \mathrm{kg}$ and is running $3.30 \mathrm{~m} / \mathrm{s}$ to the East, and player 2 has a mass of 95.0 kg is running $6.20 \mathrm{~m} / \mathrm{s}$ to the West. What is their post-collision velocity if they stick together? (Speed and direction)
( $0.898 \mathrm{~m} / \mathrm{s}$ west)
10) Two football players strike each other head on. Player 1 has a mass of $110 . \mathrm{kg}$ and is running $3.50 \mathrm{~m} / \mathrm{s}$ to the East, and player 2 has a mass of 85.0 kg is running to the West. If they stick together, and are together moving $1.90 \mathrm{~m} / \mathrm{s}$ to the West after the collision, was the velocity of player 2 before the collision? (Speed and direction) ( $8.89 \mathrm{~m} / \mathrm{s}$ west)
11) Bumper car A ( $340 . \mathrm{Kg}$ ) with velocity $4.50 \mathrm{~m} / \mathrm{s}$ East collides with the rear of car B ( $610 . \mathrm{Kg}$ ) which has a velocity of $2.40 \mathrm{~m} / \mathrm{s}$ East. After the collision, car A has a velocity of $1.40 \mathrm{~m} / \mathrm{s}$ to the West. What is the velocity of car B after the collision? (Speed and direction) ( $5.69 \mathrm{~m} / \mathrm{s}$ east)
12) Bumper car A ( $480 . \mathrm{Kg}$ ) with velocity $3.90 \mathrm{~m} / \mathrm{s}$ East collides with the front of car B $(410 . \mathrm{Kg})$ which has a velocity of $5.10 \mathrm{~m} / \mathrm{s}$ West. After the collision, car B has a velocity of $1.50 \mathrm{~m} / \mathrm{s}$ to the East. What is the velocity of car A after the collision? (Speed and direction) ( $1.74 \mathrm{~m} / \mathrm{s}$ west)
13) 85.0 kg Thor is standing on a 35.0 kg cart, and is holding a 6.40 kg hammer. Everything is moving to the right at $3.40 \mathrm{~m} / \mathrm{s}$. What is the velocity of Thor and cart if he throws the hammer $25.0 \mathrm{~m} / \mathrm{s}$ to the left? (Speed and direction) ( $4.91 \mathrm{~m} / \mathrm{s}$ right
14) 82.0 kg Thor is standing on a 25.0 kg cart, and is holding a 6.20 kg hammer. Everything is moving to the right at $2.40 \mathrm{~m} / \mathrm{s}$. What is the velocity of Thor and cart if he throws the hammer $18.0 \mathrm{~m} / \mathrm{s}$ to the left? $(3.58 \mathrm{~m} / \mathrm{s}$ right $)$
15) 88.0 kg Thor is standing on a 42.0 kg cart, and is holding a 8.40 kg hammer. Everything is moving to the right at $4.30 \mathrm{~m} / \mathrm{s}$. After he throws the hammer, he and the cart are moving $6.60 \mathrm{~m} / \mathrm{s}$ to the right. What speed and in what direction did he throw the hammer? ( $31.3 \mathrm{~m} / \mathrm{s}$ left)

Name $\qquad$
Driving Pet Peeve $\qquad$

1. A bullet going $481 \mathrm{~m} / \mathrm{s}$ imbeds in a stationary block of wood. The bullet and block combo are going $5.27 \mathrm{~m} / \mathrm{s}$ after the collision, and the combo has a mass of 12.1 kg (Bullet and block). What was the mass of the bullet?
2. A 65 kg person dives $3.68 \mathrm{~m} / \mathrm{s}$ to the right off of a 23 kg cart. What is the velocity of the cart if the cart and person were initially at rest?
3. 68 kg -Francois running $7.8 \mathrm{~m} / \mathrm{s}$ jumps on a 45.3 kg cart already rolling at $2.3 \mathrm{~m} / \mathrm{s}$ in the same direction. What speed are they going after he jumps on?
4. A 1240 kg Toyota Camry going $12.0 \mathrm{~m} / \mathrm{s}$ to the east, strikes a 2530 kg SUV going west at $16.3 \mathrm{~m} / \mathrm{s}$. What is the velocity of the wreckage after the collision?
5. A 65 kg person is riding a 23 kg cart to the right at $3.15 \mathrm{~m} / \mathrm{s}$. What speed must he dive off the cart, and in what direction, to give the cart a velocity of $22.3 \mathrm{~m} / \mathrm{s}$ to the right?

## Practice 6.2 - Conservation of Momentum (optional)

1. a. A bullet going $560 . \mathrm{m} / \mathrm{s}$ imbeds in a stationary block of wood. The 272 g bullet and block combo are going $26.0 \mathrm{~m} / \mathrm{s}$ after the collision. What was the mass of the bullet? $(12.6 \mathrm{~g})$
b. Big J Sandvik (at rest) fires a 2.80 g rifle bullet to the left at $530 \mathrm{~m} / \mathrm{s}$. He recoils at $0.0220 \mathrm{~m} / \mathrm{s}$ to the right after this. What must be the mass of Big J Sandvik? ( 67.5 kg )
c. A 2960 kg Mazda Protégé going $34.0 \mathrm{~m} / \mathrm{s}$ strikes a 1410 kg Ford Escort traveling in the same direction at $18.0 \mathrm{~m} / \mathrm{s}$ from behind. The two cars stick together. What is the velocity of the cars as they are stuck together? $(28.8 \mathrm{~m} / \mathrm{s})$
d. Two football players strike each other head on. Player 1 has a mass of $110 . \mathrm{kg}$ and is running $3.20 \mathrm{~m} / \mathrm{s}$ to the East, and player 2 has a mass of 85.0 kg is running $8.30 \mathrm{~m} / \mathrm{s}$ to the West. What is their post-collision velocity if they stick together? (Speed and direction) ( $1.81 \mathrm{~m} / \mathrm{s}$ west)
e. 85.0 kg Big J Sandvik is standing on a 35.0 kg golf cart, and is holding a 8.20 kg golf club. Everything is moving to the right at some speed. After he throws the club, he is moving on the cart $3.00 \mathrm{~m} / \mathrm{s}$ to the right and the golf club is moving to the right at $41.0 \mathrm{~m} / \mathrm{s}$. What speed and in what direction was he, his cart and his club going to begin with? ( $5.44 \mathrm{~m} / \mathrm{s}$ right)
2. a. A 3.5 g bullet going $960 \mathrm{~m} / \mathrm{s}$ imbeds in a stationary block of wood. The bullet and block combo are going $17.0 \mathrm{~m} / \mathrm{s}$ after the collision. What was the mass of the bullet and block combo? $(0.198 \mathrm{~kg})$
b. Big J Sandvik fires a rifle bullet to the right at $870 \mathrm{~m} / \mathrm{s}$. He has a mass of 72.0 kg . If he is initially at rest on a frictionless surface, and has a recoil velocity of $0.0450 \mathrm{~m} / \mathrm{s}$ to the left, what is the mass of the bullet? $(0.00372 \mathrm{~kg})$
c. A 12.0 kg cat moving an unknown velocity to the right strikes a 13.0 kg cat traveling to the right at $15.0 \mathrm{~m} / \mathrm{s}$. The two cats stick together and have a velocity of $18.0 \mathrm{~m} / \mathrm{s}$ to the right. What velocity was the first cat going before the collision? $(21.3 \mathrm{~m} / \mathrm{s})$
d. Bumper car A $(470 . \mathrm{Kg})$ with velocity $3.80 \mathrm{~m} / \mathrm{s}$ East collides with the front of car $\mathrm{B}(420 . \mathrm{Kg})$ which has a velocity of $5.20 \mathrm{~m} / \mathrm{s}$ West. After the collision, car A has a velocity of $1.30 \mathrm{~m} / \mathrm{s}$ to the West. What is the velocity of car B after the collision? (Speed and direction) ( $0.507 \mathrm{~m} / \mathrm{s}$ east)
e. 71.0 kg Big J Sandvik is standing on a 28.0 kg golf cart, and is holding a 3.60 kg golf club. Everything is moving to the right at $1.10 \mathrm{~m} / \mathrm{s}$. After he throws the golf club, he and the cart are moving $2.50 \mathrm{~m} / \mathrm{s}$ to the right. What speed and in what direction did Big J Sandvik throw the golf club? ( $37.4 \mathrm{~m} / \mathrm{s}$ left)
3. a. A 6.20 g bullet going $860 \mathrm{~m} / \mathrm{s}$ imbeds in a stationary 340 g block of wood. What is the velocity of the block of wood just after the collision? ( $15.4 \mathrm{~m} / \mathrm{s}$ )
b. A person at rest fires a 1.30 g rifle bullet to the right at $1120 \mathrm{~m} / \mathrm{s}$. The person recoils at $0.0240 \mathrm{~m} / \mathrm{s}$ to the left after this. What must be the mass of the person? $(60.7 \mathrm{~kg})$
c. A 3520 kg car (going an unknown velocity) strikes a 1020 kg car traveling in the same direction at $15.0 \mathrm{~m} / \mathrm{s}$ from behind. The two cars stick together and have a velocity of $21.0 \mathrm{~m} / \mathrm{s}$. What velocity was the first car going before the collision? $(22.7 \mathrm{~m} / \mathrm{s})$
d. Bumper car A $(310 . \mathrm{Kg})$ with velocity $4.60 \mathrm{~m} / \mathrm{s}$ East collides with the rear of car B $(540 . \mathrm{Kg})$ which has a velocity of $2.50 \mathrm{~m} / \mathrm{s}$ East. After the collision, car A has a velocity of $1.20 \mathrm{~m} / \mathrm{s}$ to the West. What is the velocity of car B after the collision? (Speed and direction) ( $5.83 \mathrm{~m} / \mathrm{s}$ east)
e. 95.0 kg Thor is standing on a 43.0 kg cart, and is holding a 5.20 kg hammer. Everything is moving to the right at $2.40 \mathrm{~m} / \mathrm{s}$. What is the velocity of Thor and cart if he throws the hammer $32.0 \mathrm{~m} / \mathrm{s}$ to the left? (Speed and direction) ( $3.70 \mathrm{~m} / \mathrm{s}$ right)
4. a. A 6.80 g bullet imbeds in a stationary 150 g block of wood. The bullet and block combo are going $24.0 \mathrm{~m} / \mathrm{s}$ after the collision. What was the velocity of the bullet before the collision? ( $553 \mathrm{~m} / \mathrm{s}$ )
b. A 55.0 kg person at rest fires a 0.0130 kg rifle bullet to the right. The person recoils at $0.0890 \mathrm{~m} / \mathrm{s}$ to the left after this. What must be the velocity of the bullet? ( $377 \mathrm{~m} / \mathrm{s}$ left)
c. A 3570 kg car going $21.2 \mathrm{~m} / \mathrm{s}$ strikes a 1470 kg car traveling in the same direction at $15.0 \mathrm{~m} / \mathrm{s}$ from behind. The two cars stick together. What velocity are they going after the collision? $(19.4 \mathrm{~m} / \mathrm{s})$
d. Two football players strike each other head on. Player 1 has a mass of $110 . \mathrm{kg}$ and is running $7.20 \mathrm{~m} / \mathrm{s}$ to the East, and player 2 has a mass of 95.0 kg is running $4.30 \mathrm{~m} / \mathrm{s}$ to the West. What is their post-collision velocity if they stick together? (Speed and direction) ( $1.87 \mathrm{~m} / \mathrm{s}$ east)
e. 115 kg Thor is standing on a 23.0 kg cart, and is holding a 4.20 kg hammer. Everything is moving to the right at $1.40 \mathrm{~m} / \mathrm{s}$. What is the velocity of Thor and cart if he throws the hammer $15.9 \mathrm{~m} / \mathrm{s}$ to the right? (Speed and direction) $(0.959 \mathrm{~m} / \mathrm{s}$ right)
5. a. A 4.50 g bullet going $770 . \mathrm{m} / \mathrm{s}$ imbeds in a stationary 210 g block of wood. What is the velocity of the block of wood just after the collision? $(16.2 \mathrm{~m} / \mathrm{s})$
b. A 62.0 kg person fires a 5.90 g rifle shell at $820 \mathrm{~m} / \mathrm{s}$. If the person is initially at rest on a frictionless surface, what is their recoil velocity after firing? $(0.0780 \mathrm{~m} / \mathrm{s})$
c. A 3230 kg car going $24.0 \mathrm{~m} / \mathrm{s}$ strikes a 2610 kg car traveling in the same direction from behind. The two cars stick together and are going $18.0 \mathrm{~m} / \mathrm{s}$ just after the collision. What velocity did the other car have before the collision? $(10.6 \mathrm{~m} / \mathrm{s})$
d. Two football players strike each other head on. Player 1 has a mass of $120 . \mathrm{kg}$ and is running $5.10 \mathrm{~m} / \mathrm{s}$ to the East, and player 2 has a mass of 99.0 kg is running to the West. If they stick together, and are together moving $1.50 \mathrm{~m} / \mathrm{s}$ to the West after the collision, was the velocity of player 2 before the collision? (Speed and direction) ( $9.50 \mathrm{~m} / \mathrm{s}$ west)
e. 105 kg Thor is standing on a 45.0 kg cart, and is holding a 8.30 kg hammer. Everything is moving to the right at $2.30 \mathrm{~m} / \mathrm{s}$. After he throws the hammer, he and the cart are moving $1.60 \mathrm{~m} / \mathrm{s}$ to the right. What speed and in what direction did he throw the hammer? ( $15.0 \mathrm{~m} / \mathrm{s}$ right)

## Physics

## Conservation of Momentum

## When two airtrack gliders collide on a near frictionless surface, the sum of the momentum should not change. Here you will test this.

1. You will need one lab partner, (Work in groups of 2), an airtrack, two gliders, a computer with Logger Pro on it, and an ultrasonic range finder.
2. Mass the two gliders and record this. Since the precision of our balances is 0.1 g , the uncertainty of the mass of the gliders is 0.05 g . Write down the mass in grams with a decimal. If it comes out even to say 301 grams, write it 301.0 g to show you measured the tenths place.
3. Level the airtrack. Run the momentum lab on the computer which will bring up a velocity $\mathbf{v}$ time graph.
4. Position the rangefinder so that it is pointing down the airtrack, but is some distance from the end of the track as it cannot "see" things closer than 50 cm . Place the glider with the flag sticking up on it on the airtrack, hit "Collect" on the graph window, and give the glider a gentle shove toward the far end of the track. You should see a nice flat velocity v time graph. (At least until it hits the far end) If the graph tilts then you don't have the airtrack level, if the graph turns into garbage at some point, then you need to aim the rangefinder better.
5. Place the glider with no flag on it in the middle of the airtrack at rest, sticky side toward the rangefinder. Place the glider with the flag on it between the rangefinder and the other glider, sticky side toward the other glider. Hit "Collect" on the graph window, and give the glider nearest the rangefinder a gentle shove toward the middle glider. Repeat this until the gliders stick together, and you get a nice graph that shows straight line velocities before and after the collision. (The graph will be flat, then step down and be flat again. Make sure that you aren't looking at a collision with the end of the track. i.e. the velocity goes from positive to negative)
6. Select a portion of the graph before the collision, and Choose "Statistics" from the "Analyze" menu. This will pop up a bubble with the Mean, Max and Min for those points. Do the same for some points after the collision.
7. When you have a nice graph, print it and it will print the statistics too.
8. Mass the gliders. (Be careful not to drop them.)

Here's what you turn in:

1. Your calculations on the total momentum of both gliders before and after the collision written directly on the graph that you made. For each calculation, calculate the Maximum, Best Guess and Minimum values the momentum could have been.
2. Your own personal answer to these questions:
A. "Does the data you have support conservation of momentum?" (Do the values overlap or not? - Cite specific numbers to back up what you say)
B. "What inherent properties of the apparatus and procedure could contribute to any discrepancies you may have found?" (Identify 2 or 3 sources of error)
C. How can you mitigate those sources of error?
written directly on the graph you made.
That's it - Just that one sheet of paper.
