

# Physics Formulas

## Chapter 2 - Linear Kinematics

<p>Formulas:</p> $v_{avg} = \frac{x}{t}$  $a = \frac{\Delta v}{t}$  $v_{avg} = \frac{(v_i + v_f)}{2}$ $v_f = v_i + at$ $x = \frac{1}{2}(v_i + v_f) \cdot t$ $x = v_i t + \frac{1}{2}at^2$ $v_f^2 = v_i^2 + 2ax$	<p>Symbols and units:</p> <p><math>v_{avg}</math> - average velocity (m/s)  <math>\Delta v</math> - change in velocity (m/s)</p> <p><math>x</math> - displacement (m)  <math>v_i</math> - initial velocity (m/s)  <math>v_f</math> - final velocity (m/s)  <math>a</math> - acceleration (m/s/s)  <math>t</math> - elapsed time (s)</p>
<p>Distance and time:</p> <p>1 hr = 60 min = 3600 sec          1 day = 86400 sec          1 km = 1000 m <math>\approx</math> 0.6214 mile          1 mile = 5280 ft = 1760 yards <math>\approx</math> 1609 m          1 foot = 12 inches <math>\approx</math> 30.48 cm          1 cm = 2.54 cm (defined)          1 m <math>\approx</math> 3.281 ft          1 yard = 3 feet</p>	<p>Shortcuts: (mph = miles/hour)</p> <p>1 m/s = 3.6 km/hr <math>\approx</math> 2.237 mph <math>\approx</math> 3.281 ft/s          1 mph <math>\approx</math> 1.467 f/s (1.466666666...) <math>\approx</math> 1.609 km/hr <math>\approx</math> 0.4470 m/s          1 f/s = 0.3048 m/s <math>\approx</math> 0.6818 mph (.6818181818...) <math>\approx</math> 1.0973 km/hr          1 km/hr <math>\approx</math> 0.2778 m/s <math>\approx</math> 0.6214 mph <math>\approx</math> 0.9113 ft/s</p>
<p>Free Fall Problems:</p> <p>Making the direction down negative (-)  <math>a = -9.8</math> m/s/s (always)  <math>v</math> at top = 0 (because.....)</p> <p>If starts and ends at same elevation:  <math>\frac{1}{2}</math> total time to top          Total time in air = 2x time to top  <math>v_f = -v_i</math></p>	

### Chapter 3 - Two dimensional motion and vectors:

#### Vectors:

##### Finding Components:

1. Draw components from tail to tip  
Use arrows for components
2. Find the length of the sides:

$$\begin{aligned} \text{opp} &= \text{hyp} \sin(\theta) \\ \text{adj} &= \text{hyp} \cos(\theta) \end{aligned}$$

3. Decide x or y, + or -

(-, +)	(+, +)
(-, -)	(+, -)

4. Write it as \_\_\_\_\_ units  $\hat{x}$  + \_\_\_\_\_ units  $\hat{y}$

##### Adding two component vectors:

$$A = 1 \text{ m x} + 2 \text{ m y}$$

$$B = 2 \text{ m x} + 3 \text{ m y}$$

$$A+B = 3 \text{ m x} + 5 \text{ m y}$$

(Add x to x and y to y)

##### Converting Components to Angle Magnitude:

1. Draw the vector  
Draw x, and from there draw y as arrows  
The vector goes from the tail of the x to the tip of the y

e.g. 3.0 m x + -4.0 m y:

$$\theta = \tan^{-1}\left(\frac{\text{opp}}{\text{adj}}\right) = \tan^{-1}\left(\frac{4.0}{3.0}\right) = 53.1^\circ$$

$$\text{mag.} = \sqrt{x^2 + y^2} = \sqrt{3^2 + 4^2} = 5\text{m}$$

2. Find the angle using  $\tan^{-1}$
3. Find the magnitude using the Pythagorean theorem

#### Projectile Motion:

H	V
X	X
$V_i$	$V_i$
$V_f$	$V_f$
$a = 0$	$a = -9.80 \text{ m/s}^2$
t	t

Fill in given, solve. Time is shared by both sides

##### Cliff Problems:

Purely horizontal initial velocity, so  $V_{i \text{ vertical}} = 0$

##### Arc Problems:

1. Break launch velocity into components
2. Fill in H/V table
3. For level range remember vertical  $V_f = -V_i$
4. To get greatest height remember vertical  $V_f$  at top = 0

##### Boat Crossing River:

1. Fill this in:

Across	Downstream
X	X
V	V
t	t

Solve. Time is shared by both sides.

##### Range Equation:

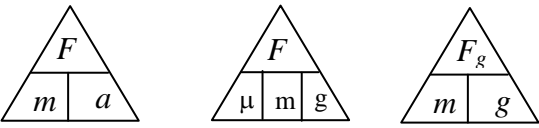

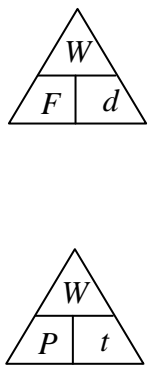

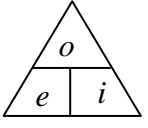

$$\text{Range} = \frac{v^2}{g} \sin(2\theta)$$

e.g.  $v^2/9.8 \cdot \sin(2 \cdot \text{angle})$

$$\theta = \frac{\sin^{-1}\left(\frac{g \cdot \text{Range}}{v^2}\right)}{2}, 90 - \theta$$

e.g.  $\sin^{-1}(9.8 \cdot \text{range}/v^2)/2$

Chapters 4, 5 and 6 Force, Work and Power, and Momentum

<p>Force:  <b><math>F = ma</math></b>  <b><math>F_g = mg</math> (<math>g = 9.8 \text{ N/kg}</math> on earth)</b>  <b><math>F_f = \mu F_N</math> (<math>= \mu mg</math>)</b></p> 	<p>Symbols and units:  <i>F</i> - force (N)  <i>m</i> - mass (kg) (<math>g/1000 = kg</math>)  <i>a</i> - acceleration (<math>m/s/s</math>)  <math>\mu</math> - coefficient of friction</p>
<p>Work and Power:  <b><math>W = Fd = Fd(\cos\theta)</math></b>  <b><math>F = mg</math> (lifting)</b>  <b>or</b>  <b><math>F = \mu mg</math> (dragging)</b></p> $P = \frac{W}{t}$ <p><b><math>P = Fv</math></b></p> 	<p>Symbols and units:  <i>P</i> - Power (W)  <i>W</i> - Work (J)  <i>F</i> - Force (N)  <i>d</i> - distance (m)  <i>t</i> - time (s)  <i>m</i> - mass (kg)  <math>\mu</math> - coefficient of friction  <b>1 HP = 745.7 W</b></p>
<p>Kinetic Energy:  <b><math>KE = \frac{1}{2}mv^2</math></b></p> <p>Potential Energy:  <b><math>PE = mgh</math></b></p> <p>Elastic (Spring) Potential Energy:  <b><math>PE_{\text{elastic}} = \frac{1}{2}kx^2</math></b></p> $e = \frac{W_o}{W_i} = \frac{P_o}{P_i} = \frac{\text{output}}{\text{input}}$  <p><b><math>Fd + mgh + \frac{1}{2}mv^2 = Fd + mgh + \frac{1}{2}mv^2</math></b></p>	<p>KE - Kinetic Energy (J)  <i>m</i> - Mass (kg)  <i>v</i> - Velocity (m/s)</p> <p>PE - Potential Energy (J)  <i>m</i> - Mass (kg)  <i>g</i> - 9.8 N/kg  <i>h</i> - Elevation (m)</p> <p>PE - Potential Energy (J) (Stored in a spring)  <i>k</i> - Spring Constant (N/m)  <i>x</i> - Stretch/Compression Distance (m)</p>
<p>Momentum:  <b><math>p = mv</math></b>  <b><math>F\Delta t = \text{impulse}</math></b>  <b><math>F\Delta t = m\Delta v</math></b></p> $\text{rate} = \frac{m}{\Delta t} \quad F = (\text{rate})\Delta v$	<p>Symbols and units:  <i>p</i> - momentum (kg m/s)  <i>m</i> - mass (kg)  <i>v</i> - velocity (m/s)  <math>\Delta v</math> - change in velocity (m/s)  <math>\Delta t</math> - elapsed time (s)</p>

## Chapter 7 - Circular Motion and Gravity

<p><b>Circular Motion:</b></p> $a = \frac{v^2}{r} \quad a = \frac{4\pi^2 r}{T^2}$ $F = ma \quad F = \mu mg \quad v = \frac{2\pi r}{T} \quad T = \frac{60s}{RPM}$ $F = \frac{mv^2}{r} \quad F = \frac{m4\pi^2 r}{T^2}$	<p>Symbols and units:</p> <p><math>F</math> - force (N)  <math>m</math> - mass (kg) (g/1000 = kg)  <math>a</math> - acceleration (m/s/s)  <math>\mu</math> - coefficient of friction  <math>v</math> - tangential velocity (m/s)  <math>T</math> - period (s)</p>
<p><b>Vertical Circle:</b></p> <p>Top: <math>1g - \text{ride}</math>      Bottom: <math>1g + \text{ride}</math></p> <p><math>(\text{m/s/s}) \div 9.8 = (\text{"g"s})</math></p> <p><math>(\text{"g"s}) \times 9.8 = (\text{m/s/s})</math></p>	<p>Inverted "g"s are negative</p> <p>1 "g" = 9.8 m/s/s</p> <p><math>a \geq 9.8</math> for water to stay in the bucket etc.</p>
<p><b>Gravity:</b></p> $F = \frac{Gm_1 m_2}{r^2}$ <p><math>G</math> - Universal Gravitation Constant  <math>(6.67 \times 10^{-11} \text{ Nm}^2/\text{kg}^2)</math></p>	<p>Symbols and units:</p> <p><math>F</math> - force (N)  <math>m_1</math> - the first mass (kg)  <math>m_2</math> - the second mass (kg)  <math>r</math> - distance separating the centers (m)  <math>G</math> - Universal Gravitation Constant  <math>(6.67 \times 10^{-11} \text{ Nm}^2/\text{kg}^2)</math></p>
<p><b>Orbit: (r, m, v):</b>      <b>Orbit: (r, m, T):</b></p> $\frac{m_s v^2}{r} = \frac{Gm_c m_s}{r^2} \quad \frac{m_s 4\pi^2 r}{T^2} = \frac{Gm_c m_s}{r^2}$ <p>Note: - the satellite mass cancels if <math>m_s \ll m_c</math>.</p> $v = \sqrt{\frac{Gm_c}{r}} \quad T = 2\pi \sqrt{\frac{r^3}{Gm_c}}$ $m_c = \frac{v^2 r}{G} \quad m_c = \frac{4\pi^2 r^3}{GT^2}$ $r = \frac{Gm_c}{v^2} \quad r = \sqrt[3]{\frac{Gm_c T^2}{4\pi^2}}$	<p>Symbols and units:</p> <p><math>m_c</math> - central body mass (kg)  <math>m_s</math> - satellite mass (kg)  <math>v</math> - orbital velocity (m/s)  <math>r</math> - orbital radius (m)  <math>T</math> - period (s)  <math>G</math> - Universal Gravitation Constant  <math>(6.67 \times 10^{-11} \text{ Nm}^2/\text{kg}^2)</math></p>

## Chapter 12 - Waves

<p><b>Basic Waves:</b></p> $v = f\lambda \quad f = \frac{1}{T} \quad v = \frac{\lambda}{T}$	<p>Symbols and units:</p> <ul style="list-style-type: none"> <li><math>\lambda</math> - Wavelength (m)</li> <li><math>f</math> - Frequency (Hz)</li> <li><math>v</math> - Wave speed (m/s)</li> <li><math>T</math> - Period (s)</li> </ul>
<p><b>Standing Waves</b></p> $L = \frac{n\lambda}{4}$  <p style="text-align: right;"><math>= 1 \lambda</math></p>  <p style="text-align: right;"><math>= \frac{1}{4} \lambda</math></p>	<p>Symbols and units:</p> <ul style="list-style-type: none"> <li><math>L</math> - Length of standing wave (m)</li> <li><math>\lambda</math> - Wavelength (m)</li> <li><math>n</math> - Number of quarter wavelengths</li> </ul>
<p><b>Doppler:</b></p> <p>Moving Source:</p> $f' = f \left( \frac{v}{v \pm u_s} \right)$ <p>Moving Observer:</p> $f' = f \left( \frac{v \pm u_o}{v} \right)$	<p>Symbols and units:</p> <ul style="list-style-type: none"> <li><math>f'</math> - Shifted Frequency (Hz)</li> <li><math>f</math> - Original Frequency (Hz)</li> <li><math>v</math> - Speed of sound (m/s)</li> <li><math>u_s</math> - Speed of source (m/s)</li> <li><math>u_o</math> - Speed of observer (m/s)</li> </ul>
