Red Elk runs at a speed of $9.20 \mathrm{~m} / \mathrm{s}$ horizontally off a cliff that is $\mathbf{6 . 4 0} \mathbf{~ m}$ above the water.
A) Set up your horizontal/vertical table, fill it with known quantities, and solve for everything you don't know. (You know horizontally: both velocities and the acceleration, and vertically: the displacement, the initial velocity, and the acceleration)

| B) What time is he in the air? <br> $(1.14 \mathrm{~s})$ | C) What is his final vertical <br> velocity of impact? <br> $(-11.2 \mathrm{~m} / \mathrm{s})$ | D) How far from the base of the <br> cliff does he hit the water? <br> $(10.5 \mathrm{~m})$ |
| :--- | :--- | :--- |
| E) Draw a picture of his velocity of impact, and turn it into an angle- <br> magnitude velocity vector. Find the angle with the horizontal, and <br> label both the angle and the magnitude. $\left(14.5 \mathrm{~m} / \mathrm{s}, 50.6^{\circ}\right.$ below horiz) | F) What is his speed of impact <br> with the water? $(14.5 \mathrm{~m} / \mathrm{s})$ |  |

Red Elk runs at a speed of $9.20 \mathrm{~m} / \mathrm{s}$ horizontally off a cliff that is $\mathbf{6 . 4 0} \mathbf{m}$ above the water.
When Red Elk is 3.1 m above the water, inspiration strikes him. (set up another $\mathrm{H} \mid \mathrm{V}$ table and solve)

- What is Red Elk's position (relative to the cliff edge) when he is 3.10 m above the water? (how far over, how far down from the edge) ( 7.55 m over, -3.30 m down)
- What is Red Elk's velocity in Vector Components and Angle Magnitude (draw a picture) notation when he is 3.1 m above the water? $\left(9.20 \mathrm{~m} / \mathrm{s} x+-8.05 \mathrm{~m} / \mathrm{s}, 12.2 \mathrm{~m} / \mathrm{s} 41.2^{\circ}\right.$ below horiz)

What is Red Elk's position (VC notation relative to the cliff edge) and Velocity (VC and AM - draw a picture) at 0.50 seconds after leaving the edge of the cliff?
( 4.60 m over, -1.23 (down), $9.20 \mathrm{~m} / \mathrm{s} \mathrm{x}+-4.905 \mathrm{~m} / \mathrm{s} \mathrm{y}, 10.4 \mathrm{~m} / \mathrm{s} 28.1^{\circ}$ below horiz)

What is Red Elk's position (VC notation relative to the cliff edge) and Velocity (VC and AM - draw a picture) when he has covered 8.0 horizontal meters of distance?
( 8.00 m over, -3.71 m down, $9.20 \mathrm{~m} / \mathrm{s} \mathrm{x}+-8.53 \mathrm{~m} / \mathrm{s} \mathrm{y}, 12.5 \mathrm{~m} / \mathrm{s} 42.8^{\circ}$ below horiz)
