A fifth grader is projected with a purely horizontal velocity from an 7.25 m tall cliff and lands 6.80 m from the base of the cliff. <br> What time is the child in the air? <br> With what purely horizontal velocity was he projected from the top of the cliff? <br> What is the speed of impact? <br> At 0.450 seconds after he leaves the edge of the cliff: <br> What is the position of the child? (How far out, how far down) <br> What is the velocity of the child in vector components and as an angle and a magnitude? <br> Draw a picture of the velocity vector. |
