$\rho=\frac{m}{V}$
$\rho=$ Density in $\mathrm{kg} \mathrm{m}^{-3}$
$\mathrm{m}=$ mass in kg
$\mathrm{V}=$ Volume in $\mathrm{m}^{3}$

Example - What is the mass of an iron cannon ball that is 17 cm in diameter?

Whiteboards:

F $=$ Force in N
$\mathrm{A}=$ Area in $\mathrm{m}^{2}$
$\mathrm{P}=$ pressure in $\mathrm{N} / \mathrm{m}^{2}$ (Pascals -Pa )

Example - A 2.4 kg box measures 15 cm by 25 cm on the base. What is the pressure under the box?

Whiteboards:

| 1. What is the pressure of 42 N on a $20 . \mathrm{cm} \mathrm{x} 32 \mathrm{~cm}$ plate? <br> $(660$ Pa | 2. What force does 3.200 kPa exert on a 78.0 cm x 182 cm <br> pane of glass? <br> $(4540 \mathrm{~N})$ |
| :--- | :--- |

## Videos 10D - Pressure Conversions

$1 \mathrm{~atm}=1.013 \times 10^{5} \mathrm{~Pa}=101.3 \mathrm{kPa}=760 . \operatorname{torr}=14.7 \mathrm{PSI}$
$\left(1 \mathrm{bar}=1 \times 10^{5} \mathrm{~Pa}\right.$, so $\left.1 \mathrm{~atm}=1.013 \mathrm{bar}\right)$
Convert 2.10 atm to $\mathrm{Pa}:\left(2.13 \times 10^{5} \mathrm{~Pa}\right)$

Convert 345 torr to $\mathrm{Pa}:\left(4.60 \times 10^{4} \mathrm{~Pa}\right)$

Convert $2.45 \times 10^{4} \mathrm{~Pa}$ to PSI: $\left.{ }^{(3.56} \mathrm{PSI}\right)$

Whiteboards:

| 1. Convert 32 psi to kPa | 2. Convert 890 Torr ( mm Hg ) to Pa |
| :--- | :--- | ( 220 kPa )

3. Convert 2000 psi to atm:
(136 atm $\approx 100 \mathrm{~atm}$ )

# Videos 10E - Gauge Pressure 

Most pressure gauges compare to Atmospheric
Gauge pressure is how much more a pressure is
than atmospheric
(i.e. this room is at 0 Gauge - Absolute P is 1 atm more)
$P=P_{\text {gauge }}+P_{\text {Atm }}$
$\mathrm{P}=$ Absolute (actual) pressure
$\mathrm{P}_{\text {gauye }}=$ Gauge pressure
$\mathrm{P}_{\mathrm{Atm}}=$ Atmospheric pressure
Example 1 - If your tyre pressure gauge reads 220 kPa , what is the actual pressure in the tyre in kPa and Pa ?

Example 2 - What is the gauge pressure if you have an actual pressure of 1072 Torr?

Whiteboards: $1 \mathbf{~ a t m}=1.013 \times 10^{5} \mathbf{P a}=101.3 \mathrm{kPa}=760$ Torr $=14.7 \mathbf{~ p s i}$

| 1. What is the absolute pressure if you read 35 psi gauge? <br> Answer in psi and Pascals <br> (49.7 psi, 3.42E5 Pa) | 2. If you have an absolute pressure of 812 Torr, what is the <br> gauge pressure? Answer in Torr <br> (52 Torr ) |
| :--- | :--- |

$\mathrm{P}=$ Pressure (gauge) in Pa
$\rho=$ Density in $\mathrm{kg} \mathrm{m}^{-3}$
$\mathrm{g}=9.81 \mathrm{~N} \mathrm{~kg}^{-1}$
$\mathrm{h}=$ depth in m

Example - What is the gauge pressure $3800 \mathrm{~m}(12,500 \mathrm{ft})$ deep in the ocean where the wreck of the Titanic lies? Calculate it in Pa , PSI and atm. $\left(\rho=1.025 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$

$$
\begin{aligned}
& P=P_{o}+\rho_{f} g d \\
& \begin{array}{l}
\mathrm{P}=\text { Absolute Pressure in Pa } \\
\mathrm{P}_{\mathrm{o}}=\text { Atmospheric pressure above fluid } \mathrm{Pa} \\
\rho_{\mathrm{f}}=\text { Density (of fluid?) in } \mathrm{kg} \mathrm{~m}^{-3} \\
\mathrm{~g}=9.81 \mathrm{Nkg}^{-1} \\
\mathrm{~d}=\text { depth in } \mathrm{m}
\end{array}
\end{aligned}
$$

Example - At what depth below fresh water is the absolute pressure 100 . $\mathrm{PSI} ?\left(\mathrm{Po}=1.013 \times 10^{5} \mathrm{~Pa}, \rho=1.00 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$

Whiteboards:

1. The water level in a water tower is $30 . \mathrm{m}$ above the point where a faucet is. What is the absolute pressure in Pa and PSI? $\left(\mathrm{P}_{\mathrm{o}}=1.013 \times 10^{5} \mathrm{~Pa}, \rho=1.00 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$ What is the gauge pressure in PSI? $\mathrm{P}=\mathrm{P}_{\mathrm{o}}+\rho \mathrm{gh} \quad(4.0 \mathrm{EE} 5 \mathrm{~Pa}, 57 \mathrm{psi}, 43 \mathrm{psi})$
2. The density of air at STP is $1.29 \mathrm{~kg} \mathrm{~m}^{-3}$. What is the difference in air pressure between the top and the bottom of the 381 m tall Empire State Building in Pa ? (assume the density is constant....) $\Delta \mathrm{P}=\rho \mathrm{gh}$
If the pressure is $1.025 \times 10^{5} \mathrm{~Pa}$ at the bottom, what is the pressure at the top?
(4.82E3 Pa, 0.977E5 Pa (9.77E4 Pa))
3. At what depth in mercury is the gauge pressure equal to one atmosphere? $\left(\rho=13.6 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$ (answer in m and mm )
$\mathrm{P}=\rho \mathrm{gh}$
$1 \mathrm{~atm}=1.013 \times 10^{5} \mathrm{~Pa}=101.3 \mathrm{kPa}=760$ Torr $=14.7 \mathrm{psi}$
( $0.759 \mathrm{~m}, 760 \mathrm{~mm}$ )

$$
P=\frac{F}{A} \quad P_{i n}=P_{o u t}
$$

Example - A hydraulic jack has an input piston with a diameter of 8.20 mm , and an output piston diameter of 95.0 mm . What force in Newtons do you need to apply to lift a ton? ( 8900 N ) What is the pressure in Pa? How far must you move the input cylinder to raise the car 10.0 cm ?

Whiteboards:

1. A car has a master cylinder bore size of 2.50 cm , and a caliper bore of 4.40 cm . What force does the caliper exert if you press on the master cylinder with a force of 150 N ? ( 465 N )
2. A hydraulic jack has an output cylinder with a 5.2 cm bore, and needs to lift a $53,400 \mathrm{~N}$ weight with an input force of 356 N . What is the diameter of the input cylinder needed? ( 0.0042 m or 0.42 cm )
```
\(B=\rho_{f} V_{f} g\)
    \(\rho_{\mathrm{f}}=\) Density of fluid in \(\mathrm{kg} \mathrm{m}^{-3}\)
    \(\mathrm{V}_{\mathrm{f}}=\) Volume of displaced fluid in \(\mathrm{m}^{3}\)
    \(\mathrm{g}=9.81 \mathrm{~N} \mathrm{~kg}^{-1}\)
```

Example - What is the buoyant force on a 3.0 cm diameter air bubble under water? $\rho \mathrm{H} 2 \mathrm{O}=1.0 \mathrm{E} 3 \mathrm{~kg} \mathrm{~m}^{-3}$

Example - What is the buoyant force on a 5.45 kg iron shot submerged in water? What is the weight of the shot in air, and what is its apparent weight submerged?
$\rho \mathrm{Fe}=7.8 \mathrm{E} 3 \mathrm{~kg} \mathrm{~m}^{-3}, \rho \mathrm{H} 2 \mathrm{O}=1.0 \mathrm{E} 3 \mathrm{~kg} \mathrm{~m}^{-3}, \rho=\mathrm{m} / \mathrm{V}$ so $\mathrm{V}=\mathrm{m} / \rho$

Example - The King's crown has a mass of 14.7 kg , but appears to have a mass of only 13.4 kg when weighed when it is submerged in water. What is the density of the crown? Is it gold?
$\rho \mathrm{Au}=19.3 \mathrm{E} 3 \mathrm{~kg} \mathrm{~m}^{-3}, \rho \mathrm{H} 2 \mathrm{O}=1.0 \mathrm{E} 3 \mathrm{~kg} \mathrm{~m}^{-3}, \rho=\mathrm{m} / \mathrm{V}$ so $\mathrm{V}=\mathrm{m} / \rho$

Whiteboards:

1. What is the buoyant force on a rectangular block of wood that measures $12 \times 23 \times 15 \mathrm{~cm}$ if it is submerged in the Dead Sea where the density of the water is $1240 \mathrm{~kg} \mathrm{~m}^{-3}$ ? (convert cm to m first)
(50. N)
2. A $15 \times 15 \times 5.0 \mathrm{~cm}$ piece of wood floats in water ( $1000 . \mathrm{kg} \mathrm{m}^{-3}$ ) face down in the water with the waterline 3.1 cm up the 5.0 cm side:
What is its mass?
What is its density?
( $620 \mathrm{~kg} \mathrm{~m}^{-3}$ )
3. A $25 \times 25 \times 10 \mathrm{~cm}$ block of iron $\left(7.80 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$ floats on mercury $\left(13.6 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}\right)$ If one of the $25 \times 25 \mathrm{~cm}$ faces is down into the mercury, how far into the mercury does the block sink before coming to equilibrium? $(5.7 \mathrm{~cm})$

## Videos 10 I - Continuity

Name

Example - What is the volume flow rate of air moving at $1.30 \mathrm{~m} / \mathrm{s}$ down a hallway that measures 3.20 m by 4.10 m ? What time will it take to change the air in a room that measures $10.2 \mathrm{~m} \times 14.0 \mathrm{~m} \times 5.20 \mathrm{~m}$ ?

## Concept 1

$\mathrm{A}_{1} \mathrm{v}_{1}=\mathrm{A}_{2} \mathrm{v}_{2}$
A = Area (m ${ }^{2}$ )
$\mathrm{v}=$ Velocity $(\mathrm{m} / \mathrm{s})$
A 12.0 cm inner diameter pipe with water flowing at $1.18 \mathrm{~m} / \mathrm{s}$ narrows to 5.00 cm inner diameter. What is the velocity in the narrow part? What is the volume flow rate in $\mathrm{m}^{3} / \mathrm{s}$ ?

Whiteboards:

1. Water is going at $1.45 \mathrm{~m} / \mathrm{s}$ down a fire hose with a 6.20 cm inner diameter. If the water leaves the hose at a speed of $17.3 \mathrm{~m} / \mathrm{s}$, what is the inner diameter of the nozzle? $(1.79 \mathrm{~cm})$
2. All the air going down a $3.0 \times 4.0 \mathrm{~m}$ hallway goes through a doorway that measures 74 cm by 203 cm . If the air in the doorway is going $1.8 \mathrm{~m} / \mathrm{s}$, what is the speed of the air in the hallway? $(0.23 \mathrm{~m} / \mathrm{s})$
3. A hydraulicking monitor or giant discharges water at $44.0 \mathrm{~m} / \mathrm{s}$ from a 3.0 cm diameter nozzle. What is the flow rate in $\mathrm{m} 3 / \mathrm{s}$, and what is the velocity in the 12 cm diameter supply pipe?
What recoil force does it exert? $\left(0.031 \mathrm{~m}^{3} / \mathrm{s}, 2.75 \mathrm{~m} / \mathrm{s}, 1400 \mathrm{~N}\right.$ don't worry about the force so much)

## Videos 10J - Bernoulli

$\qquad$

Write down the derivation:

$$
P_{1}+\rho g h_{1}+\frac{1}{2} \rho v_{1}^{2}=P_{2}+\rho g h_{2}+\frac{1}{2} \rho v_{2}^{2}
$$

$\mathrm{P}=$ Pressure in Pa
$\rho=$ Density of fluid in $\mathrm{kg} \mathrm{m}^{-3}$
$\mathrm{g}=9.81 \mathrm{~N} \mathrm{~kg}^{-1}$
$\mathrm{h}=$ Height in m
$\mathrm{v}=$ velocity in $\mathrm{m} / \mathrm{s}$

Water with a density of $1000 \mathrm{~kg} \mathrm{~m}^{-3}$
pours from a very large tank of water from a pipe that is 34.0 m
below the surface of the water.
What is its velocity?

## Example

Air with a density of $1.29 \mathrm{~kg} \mathrm{~m}^{-3}$ flows
at $2.00 \mathrm{~m} / \mathrm{s}$ where a duct is 48.0 cm in diameter under a pressure of $1.00 \times 10^{5}$ Pa . What is the a . velocity and b .
pressure when the pipe narrows to 12.0 cm ?

Whiteboards.

1. The wind is moving horizontally at $12.0 \mathrm{~m} / \mathrm{s}$ over a level rectangular roof that measures 4.50 m by 8.00 m .
A. What is the pressure difference between the bottom (still air) and the top (moving air) of the roof surface? Use $1.29 \mathrm{~kg} \mathrm{~m}^{-3}$ for the density of the air, neglect the change in height, and assume (if you need to) that the pressure underneath is $1.013 \times 10^{5} \mathrm{~Pa}$. B. What is the net upward force on the roof? ( $92.9 \mathrm{~Pa}, 3340 \mathrm{~N}(751 \mathrm{lbs})$ )
2. A very large Nitrogen tank is at 2000. PSI. If nitrogen at STP has a density of $1.17 \mathrm{~kg} \mathrm{~m}^{-3}$, how fast is the gas going if the valve breaks off when the tank is horizontal
(assume P1 is 2000 PSI (convert), v1 is zero?, P2 is 1.013 E 5 Pa , solve for v2. Ignore change in height.) $1 \mathrm{~atm}=14.7 \mathrm{PSI}$
( 4835.9 or roughly $4840 \mathrm{~m} / \mathrm{s}, 3090 \mathrm{~N}(695 \mathrm{lbs}$ ) )
3. What pressure is needed in a fountain if it is spraying water straight up to a height of 23.2 m ? What is the gauge pressure?
$\rho=1000 . \mathrm{kg} \mathrm{m}^{-3}, \mathrm{P}_{2}=1.013 \mathrm{E} 5 \mathrm{~Pa}$
$\left(3.29 \times 10^{5} \mathrm{~Pa}, 2.28 \times 10^{5} \mathrm{~Pa}\right)$
4. A water faucet breaks in the Physics room, spraying water upwards. If the gauge pressure in the water mains is 21.0 PSI, (at $\mathrm{v}=0$ ) with what speed does the water hit the ceiling 4.80 m above the faucet? How much time does it take a custodian to come down and fix the leak?
$\rho=1000 . \mathrm{kg} \mathrm{m}^{-3}, \mathrm{P}_{2}=1 \mathrm{~atm}=1.013 \mathrm{E} 5 \mathrm{~Pa} .1 \mathrm{~atm}=14.7 \mathrm{PSI}$ ( $14.0 \mathrm{~m} / \mathrm{s}$ )
5. Water flows at $2.00 \mathrm{~m} / \mathrm{s}$ at ground level with a pressure of $1.15 \times 10^{5} \mathrm{~Pa}$ through a 10.0 cm diameter pipe. What is the pressure if it is at an elevation of 3.50 m going through a 6.00 cm diameter pipe? (Find the second speed first. $\rho=1000 . \mathrm{kg} \mathrm{m}^{-3}$ )
(6.72×10 ${ }^{4} \mathrm{~Pa}$ )

## 10K

## Definition of Viscosity

$$
F=\eta A \frac{v}{l}
$$

$\mathrm{F}=$ Force needed to maintain velocity ( N )
$\eta=$ Viscosity in $\mathrm{Ns} \mathrm{m}^{-2}$ or Pas
$\mathrm{A}=$ Area of plates in $\mathrm{m}^{2}$
$\mathrm{l}=$ distance separating plates in m
$\mathrm{v}=$ velocity of the plates in $\mathrm{m} / \mathrm{s}$
1 Pas $=1000$ centipoises $(\mathrm{cP})$

## Example

A person slides a $23.0 \mathrm{~cm} \times 45.0 \mathrm{~cm}$ pan over the surface of some
molasses with a viscosity of 8.7 Pa s . The molasses is 2.1 cm deep, and the person applies a pound of force. $(4.45 \mathrm{~N})$ What speed will the pan move across the surface?

10 L
Stokes's Law - a small sphere moving through a fluid
$F_{\mathrm{D}}=6 \pi \eta r v$

## Example

A droplet of water mist $\left(\rho=1000 \mathrm{~kg} \mathrm{~m}^{-3}\right)$ has a radius of 4.8 microns. What is its terminal velocity as it falls through air $\left(\eta=1.8 \times 10^{-5} \mathrm{~Pa} \mathrm{~s}\right)$ ? (ignore the buoyant force)
$F_{\mathrm{D}}=6 \pi \eta r v$
$F_{D}=$ Force needed to maintain velocity $(N)$
$\eta=$ Viscosity in $\mathrm{Nsm}^{-2}$ or Pas
$r=$ radius of sphere in $m$
$\mathrm{v}=$ velocity of the sphere in $\mathrm{m} / \mathrm{s}$

10M
Reynolds number-fluid in a pipe

$$
R=\frac{v r \rho}{\eta} \quad \frac{\text { Inertial Forces }}{\text { Viscous forces }}
$$

R = Reynolds number (unitless!!!!)
$\eta=$ Viscosity in $\mathrm{Nsm}^{-2}$ or Pas
$\rho=$ density of fluid in $\mathrm{kg} \mathrm{m}^{-3}$
$r=$ radius of object or pipe in $m$
$\mathrm{v}=$ velocity of the object relative to fluid in $\mathrm{m} / \mathrm{s}$

## Example

Water at $20 .{ }^{\circ} \mathrm{C}\left(\eta=1.0 \times 10^{-3} \mathrm{Pas}, \rho=1000 . \mathrm{kg} \mathrm{m}^{-3}\right)$ flows down an 8.0 mm diameter glass tube at $0.120 \mathrm{~m} / \mathrm{s}$. Calculate the Reynolds number to determine if the flow is laminar. What is the maximum velocity the water could have and still be laminar? (For sure $\ldots$ set $R=1000$ )
$\bar{\Longrightarrow} \quad R=\frac{v r \rho}{\eta}$

Whiteboards.

5. What is the maximum speed air could move down a 12.2 cm diameter duct and have laminar flow? ( $\mathrm{R}<1000$ )
$\rho=1.29 \mathrm{~kg} \mathrm{~m}^{-3}$
$\eta=1.81 \times 10^{-5} \mathrm{~Pa} \mathrm{~s}$
( $0.230 \mathrm{~m} / \mathrm{s}$ )
