## Physics Millikan Prep Lab

1. All of these numbers are the product of a random integer and approximately the same non-integer.

| 40.9475 | 45.9661 | 16.2458 | 29.9228 | 27.2959 |
| :--- | :--- | :--- | :--- | :--- |
| 35.538 | 35.1581 | 18.9561 | 35.1041 | 32.482 |
| 27.3335 | 27.1694 | 29.9297 | 40.6765 | 24.413 |
| 27.2691 | 24.4337 | 38.0671 | 19.0247 | 21.6272 |
| 30.0691 | 24.411 | 10.9304 | 21.8267 | 29.7689 |
| 35.1612 | 27.028 | 24.4105 | 27.233 | 38.0465 |
| 29.7615 | 29.8704 | 40.6529 | 29.9329 | 35.0964 |
| 38.3087 | 29.8171 | 29.9978 | 19.1271 | 46.3732 |
| 37.9816 | 27.29 | 30.0056 | 35.4709 | 27.0478 |
| 38.0714 | 16.3893 | 32.7231 | 21.8214 | 24.3537 |

- On the reverse $I$ have sorted them and made a histogram of them
- What is the step size? (The non-integer) (High step-low step divided by the \# of upward transitions or steps)
- What is the uncertainty in your guess? (•The uncertainty will be the range/2 of the most populous step, divided by the number of steps you used to determine the step size.)

2. Show the derivation of an equation for $q$ - the charge on a sphere in terms of $\boldsymbol{\rho}$ - the density of the sphere, $\mathbf{r}$ - the radius of the sphere, $\mathbf{d}$ the separation of the plates, $\mathbf{V}$ - the voltage applied to the plates, and $\mathbf{g}$ the acceleration of gravity. •Use dimensional analysis (plug in the units to show they cancel) to check your answer. Show this

Useful formulas:
$\mathrm{F}=\mathrm{mg}, \mathrm{F}=\mathrm{Eq}, \mathbf{V}=\mathrm{Ed}, \mathrm{Volume}$ of a sphere $=4 / 3 \pi \mathbf{r}^{3}, \boldsymbol{\rho}=\mathrm{m} /$ Volume $\rho\left(\frac{4}{3} \pi r^{3}\right) g=\left(\frac{V}{d}\right) q$
Units for Dimensional analysis: $\left(\rho: \mathrm{kg} / \mathrm{m}^{3}\right)(\mathrm{r}: \mathrm{m})(\mathrm{g}: \mathrm{N} / \mathrm{kg})(\mathrm{V}: \mathrm{Nm} / \mathrm{C})(\mathrm{q}: \mathrm{C})(\mathrm{d}: \mathrm{m})$
3. Show the derivation of an equation for $\boldsymbol{r}$ - the radius of a sphere in terms of $\boldsymbol{\eta}$ - the viscosity of air, $\mathbf{v}$ - the terminal velocity of a sphere, $g$ - the acceleration of gravity, and $\boldsymbol{\rho}$ - the density of a sphere. •Use dimensional analysis (plug in the units to show they cancel) to check your answer. Show this

Useful formulas:
$\mathrm{F}=\mathrm{mg}, \mathrm{F}=6 \pi \boldsymbol{\eta} \mathbf{r v}$, Volume of a sphere $=4 / 3 \pi \mathbf{r}^{3}, \boldsymbol{\rho}=\mathrm{m} /$ Volume $\rho\left(\frac{4}{3} \pi r^{3}\right) g=6 \pi \eta r v$
Units for Dimensional analysis: $\left(\rho: \mathrm{kg} / \mathrm{m}^{3}\right)(\mathrm{r}: \mathrm{m})(\mathrm{g}: \mathrm{N} / \mathrm{kg})\left(\eta: \mathrm{Ns} / \mathrm{m}^{2}\right)(\mathrm{v}: \mathrm{m} / \mathrm{s})$
