## Introduction

This Diploma Programme (DP) Physics data booklet accompanies the DP Physics guide and DP Physics teacher support material. It contains electrical symbols, mathematics equations, constants, and physics equations relevant to the course.

Students must have access to a copy of this booklet for the duration of the course so that they can become familiar with its contents. Direct reference is made to relevant equations in the "Understandings" sections of the guide. This helps to maintain the emphasis on interpretation and application rather than memorization of symbols, constants and equations.

The Physics data booklet is split into two sections. The first includes information which is used throughout the teaching of DP physics and the second contains equations relevant to specific themes and topics. Note that all equations relate to the magnitude of the quantities only. Vector notation has not been used.

Each student must have access to a clean copy of the Physics data booklet during examinations. It is the responsibility of the school to download a copy of this booklet from IBIS or the Programme Resource Centre and to ensure that there are sufficient copies available for all students.
