Name $\qquad$
Show your work and circle your answers to receive full credit (but don't round until the end) Ignore air friction, use the convention that down is negative, and use $g=9.80 \mathrm{~m} / \mathrm{s} / \mathrm{s}$.

## 1-3: A ball is launched at $36.0 \mathrm{~m} / \mathrm{s}$ at an angle of $62.0^{\circ}$ above horizontal on a level field.

 1 . What time is the ball in the air?2. What horizontal distance does it travel before hitting the ground again?
3. What is the greatest height the ball reaches? What is its speed at this height?
4. Use the range equation to find these ranges for the velocities and launch angles:

Velocity $=12.0 \mathrm{~m} / \mathrm{s}$, Launch Angle $=38.0^{\circ}$ Range $=$ $\qquad$

Velocity $=31.0 \mathrm{~m} / \mathrm{s}$, Launch Angle $=19.0^{\circ}$ Range $=$ $\qquad$
5. Use the range equation to find the proper launch angles for the following velocities and ranges:

Velocity $=34.0 \mathrm{~m} / \mathrm{s}$, Range $=54.0 . \mathrm{m}$, Launch Angles $=$ $\qquad$ and $\qquad$ degrees

Velocity $=14.0 \mathrm{~m} / \mathrm{s}$, Range $=18.0 \mathrm{~m}$, Launch Angles $=$ $\qquad$ and $\qquad$ degrees
