Name
Show your work, round to about three total digits, circle your answers, and label them with units. Use the convention that up is positive. A 20.5 kg mass hangs on a rope.

1. What does the tension need to be in the rope to accelerate the mass downwards at $2.21 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ ?
2. What is the acceleration of the mass if the tension in the rope is $150 . \mathrm{N}$ ?
3. What is the tension in the rope if the mass is accelerating upwards at $6.20 \mathrm{~m} / \mathrm{s} / \mathrm{s}$ ?
4. What is the acceleration of the mass if the tension in the rope is $460 . \mathrm{N}$ ?
5. The mass begins to move downward from rest, displacing itself downward 12.0 m in 2.80 s with a uniform acceleration. What is the tension in the rope during this time?
